Scanner API

Method	Description
public Scanner(File source)	Constructor. Creates a scanner on the given file.
public Scanner(InputStream source)	Constructor. Creates a scanner on the given stream.
public boolean hasNext()	Returns true if the scanner has another token.
public String nextLine()	Returns an entire line of input as a String.
public void close()	Closes the scanner.

PrintWriter API

Method	Description
public PrintWriter(File destination)	Constructor. Opens the given file for writing.
public void close()	Closes the file after you're done writing to it. **(This is a <u>must</u> after you're done writing!)**
public void print(String s)	Prints the given string to the opened file
public void println(String s)	Prints the given string and a newline to the opened file
